AGRI - TOURISM  
LANKA (PVT) LTD

## ABOUT SISILI PROJECTS CONSORTIUM (PVT) LTD

Founded as Sriyani Industries in 1980, Sisili grew from a small-scale absorbent cotton gauze manufacturer to a leading healthcare company dealing in medical disposables, devices, pharmaceuticals and equipment. With a turnover of US\$ 23 million in the past financial year, Sisili focuses on both local manufacturing as well as authorized distributors from principals in several countries (such as India, China, Germany, Indonesia and Czech Republic).

Sisili, together in a joint venture partnership with Lalan Rubbers Pvt. Ltd., also initiated the supply of locally manufactured disposable medical examination and surgical sterile gloves in Sri Lanka. The sterilization process occurs at the Multi-purpose Gamma Irradiation Facility under the Ministry of Power and Energy – and both products have over 90% local value addition; and are ISO and CE certified.

We are also Sri Lanka's largest hazardous clinical waste management service provider – through a US\$ 5.2 million, state of the art incineration facility processing over 15,000kg/day. We cater to approximately 10 million people located in the Western, Central and Southern Provinces.

With growing interests in healthcare, and diversifications into other sectors, we consider ourselves as a rapidly developing entity capable of offering a wide range of solutions and services as follows:

- Manufacturing in Healthcare
- Authorized Distributors for Medical Disposables, Consumables and Pharmaceuticals
- Hazardous Waste Management
- Engineering Services
- Agriculture & Eco-Tourism

## ABOUT SISILI AGRO'S FLORICULTURE

Sri Lanka has a rich biodiversity and varying climatic regions that have helped the country to become one of the best quality floriculture production centers in the world – with a product range from tropical to temperate flora. These abilities are further enhanced with the availability of rich, fertile soil, natural substrates (such as cocopeat) for growth media, technology for propagation as well as skilled and knowledgeable workforce.

Using these naturally abundant resources, in 2018, Sisili diversified into agriculture through the acquisition of an 18 acre, tea estate in the beautiful hills in Kotmale. The property being transformed into a multi-crop property by diversifying agricultural produce to include pepper, cardamom and vanilla. We have adopted good agricultural practices (GAP) farming in order to cultivate produce free from harmful chemicals, benefiting both the environment and our consumers.

We have also established nurseries and partnering communities in both dry and wet zones in Sri Lanka for the development of the following ranges of floriculture:
